

## How we do it...

### How We Do It

Professional Technical Systems, Inc. (PTS), uses a synergistic suite of refined technologies designed help you lower your utility bill. In our 4-step process to energy savings, we:

1. **Evaluate your facility.** This is a valuable service that helps us understand how you use electricity and answers the fundamental question: *Can we help you lower your utility bill?*
2. **Analyze your usage.** If you like what we discover, we then bring a team of skilled engineers and technicians to your site to conduct an in-depth study of your electrical usage. Every device, machine, appliance, or system is evaluated for its contribution to your electrical consumption.
3. **Prepare recommendations.** We develop a custom solution for your facility. We work with you to optimize your return on investment (ROI) while providing you the highest savings possible. This in-depth report can reveal details about your facility that pays for itself alone.
4. **Install the solution.** Our factory-trained project managers implement your solution in an efficient and non-intrusive manner. We assure that our technology suite performs as designed and precisely to your needs.

ENERGY STAR® is a program of the  
U.S. Environmental Protection Agency  
and the U.S. Department of Energy

# What we do...

## A PTS Energy Saving System:

- **Lowers** kWh usage by up to 30%.
- **Adds** profit to your company's bottom line.
- **Protects** your electrical devices from harmful transient voltage including catastrophic surge events including lightning strikes.
- **Extends** the life of all of your electrical equipment.
- **Improves** your network/computer, security/camera, and fire alarm system operation and reliability.
- **Reduces** your maintenance costs for electrical equipment, such as machinery, motors, lights, ballasts, computers, networks, phone systems, chillers, transformers, HVAC systems, dehumidifiers, etc.
- **Monitors** your consumption to determine your solution's effectiveness.

## Professional Factory Installation

PTS uses a state-of-the-art technology suite to lower your utility bill. Proper installation of these technologies is essential. Your factory-installed turn-key solution typically addresses lighting, refrigeration, air conditioning, motors, water heating, thermal reflection, insulation, cleaning, surge protection, and more.

## Warranty

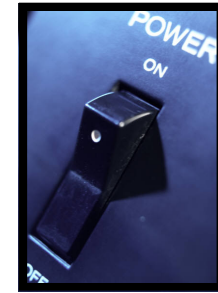

PTS warrants all of its technologies for an unprecedented period of 5 years. This gives you peace of mind in knowing that your custom-developed energy savings solution will work reliably and consistently.

## Payment Options

Your solution has several payment options. Our lease option can even generate an immediate reduction in your monthly utility bill while paying for itself. Contact us for a complete list of options for your specific situation.

## The Cost of Energy

Energy costs continue to rise and current predictions estimate electrical consumption to double in the next 20 years. With our energy saving solutions, you can keep a step ahead of these upward-spiraling costs. Side benefits from our solution help to reduce your ongoing maintenance and support costs by providing higher reliability and increased efficiency.

## Company History

Professional Technical Systems, Inc. was founded in 1984 by Mike Prentice and John O'Brien by designing and manufacturing the world's finest transient voltage surge suppressors (TVSS).

PTS Energy products grew from this entrepreneurial beginning and is proud to align its Corporate goals with President Bush's energy conservation plans *to promote energy efficiency...and provide enhanced conservation efforts – all while reducing air pollution and protecting the environment.*

President Bush and Mr. Prentice

Current PTS customers include Florida Department of Transportation, Florida Supreme Court building, Skyway Bridge in St. Petersburg, FL, the City of Temple Terrace, FL, the Tampa Bay Skating Association, and many more.
